

You are invited to the 7x24 January 27th event!

The end-to-end reliability forum.
Southeast Michigan Chapter

7 X 24 Exchange is the leading knowledge exchange for those who design, build, use and maintain mission critical enterprise information infrastructures. 7 X 24 Exchange's goal is to improve end-to-end reliability by promoting dialogue among these groups.

Is your goal to keep your company on the cutting edge of new developments in the rapidly changing world of uninterruptible systems and infrastructures?

Come learn about the challenges of PUE and tools to help you better manage and monitor your PUE

Meeting Highlights:

Data center power usage effectiveness (PUE), developed by The Green Grid, has received a lot of attention. But how do you use PUE to minimize wasted power? How do you identify stranded power and thereby possibly delay the construction of a very expensive new data center? How do you justify for management the investment to gather detailed power information?

Our meeting will start with Blue Cross Blue Shield of MI sharing with you why they did a PUE study, their results from the study and future goals for them to improve their PUE. Also we will have Geist IF and Raritan presenting on ideas of how to manage and monitor your PUE.

When: Thursday January 27 at 4:00 P.M. to 8:00 P.M.

Where: Pi Restaurant (the Pub), 28775 Franklin Rd., Southfield MI 48034
(go to Banquet Hall behind Restaurant)

What: Light Dinner, Beer and Wine will be served during the event.
